You have been asked to design and developed a INVOICE CRUD system with following functionality:

Functionality of the system:
1. User able signup & Login to the system
2. User able to create new invoice
3. User able to see invoice list
4. User able to edit invoice
5. User able to view invoice and print it
6. User able to download invoice as pdf (will get extra credit)

Technology to use:
1. Frameworks & Libraries: Laravel + vuejs / react + jquery (Latest version)
2. Stying: Bootstrap/tailwind
3. DB: MySql

Note:
1. Start From scratch not and existing template or existing code.
2. Design the database that can be used as mobile app api (will get extra credit)
3. Maximum time to complete the task 48 hours
4. Send us the code via github link whatever you have done within time

Deliverable:
1. Commit at least once a in every 3hour
2. Upload the code to the github and send us public link once completed the task
